Appendix 3

Factors affecting police-reported crime statistics

Several factors may have a cumulative impact on police-reported crime statistics. To be included in the UCR Survey, crimes first have to be reported to police. Hence, the number of crimes recorded by police depends largely on Canadians' willingness to report incidents for which they are victims or witnesses. According to the 2009 General Social Survey on Victimization, 31% of crimes in the year preceding the survey were reported to police (see Text box 3 for more information about the General Social Survey and reporting to police).

Differences in police services' priorities, policies, procedures and enforcement practices will also have an effect, as will the availability of resources. For example, statistics for crimes such as impaired driving, prostitution and drug offences can be notably affected by police service priorities and operations. Some police services may also make greater use of municipal bylaws or provincial statutes for minor offences such as mischief and disturbing the peace.

In addition, social and economic factors can have an impact on the volume of crime in a society or a particular sector. In particular, crime rates can be affected by age demographics (Stevens et al. 2013; Carrington 2001), economic conditions (Andresen 2012; Phillips 2012; Pottie-Bunge et al. 2005), neighbourhood characteristics (Quick 2013; Charron 2011; Savoie 2008), the emergence of new technologies (Wall 2010; Nuth 2008) and Canadians' attitudes toward crime and risky behaviour (Mishra 2009; Ouimet 2002).
